

CIS 350 Meeting Minutes
Disc Finders
Corey Moura, Timothy Beler
10/18/2020

Introduction:

In this meeting we intend to touch base on the hardware we both received in the mail and the code that is required to proceed, the midterm, and the balancing the workload between the group members. The timeline has already been constructed by Corey M. and just needs some updates to make sure it's presentable.

Business from previous meeting:

- Discussion of the hardware that was purchased.
 - Tim still needs to buy the necessary wires that were not included in the package.
- Discussion of the coding library that was included with the hardware.
 - Both members downloaded the library and are going through it. Plan on asking each other for help with the syntax if needed. Maybe do a coding session over Discord or Zoom.

Topics discussed:

- What is required for the Midterm
 - Decided the bare minimum for presentation and wanted to
- Updating the time table to meet the requirements and the expectations for the future.

Concerns raised:

- Making sure we have a presentation for the midterm that isn't just discussion of hunting down the right hardware for the project.
 - Basic prototypes of the code.
 - Diagrams of user experiences.
 - Cost estimation. (?)
- Balancing the workload as we get into the meat of the project.
- Having to wait on the right cords in order to code.

Tasks for the team:

- Both members download the coding library and start to flesh out the skeleton of the code.
- Both members look up the requirements for the midterm presentation and meet midway through the week to discuss their progress.

Issues that need to be addressed at the next meeting

- None were raised.
