Team name: Disc Finders

Members present: Corey Moura, Timothy Beler

Date: 10/22/2020

Time: 11:00 AM

Discussion points:

- Putting together the hardware:
    - Need to solder the parts together. Tim ordered the soldering equipment to make this possible.
- Getting the presentation ready:
    - Discussing what aspect of the project we should touch on. Decided on brief overview of disc golfing and an illustration of how easy it is to lose a disc.
- Discussed where to find the coding libraries needed to program the Aduino.
    - Corey took the time to isolate the code that is needed for the project.

Goals for next week (include responsibilities)

- Put the finishing touches on the presentation.
- Do a dry run of the presentation and make sure all the tech is in working order
- Start putting more features to the skeleton of the program.
    - Look for a way to describe the distance the chip is away from the device.
- Laying out more concrete goals that align with the timeline set out.
